## Executive Summary

Detail-oriented AI & Data Science student with a strong foundation in programming, machine learning, and AI-driven solutions. Experienced in building LLM-based applications, orchestrating multi-agent systems, and training predictive models in Python. Proficient in mobile app development using Flutter, with a track record of building responsive, user-centric interfaces. Focused on translating machine learning concepts into practical, real-world applications through well-engineered, autonomous workflows.

## Skills and Technologies

- **Programming & Data Engineering:** Python, SQL, Data Analysis.
- **Machine Learning & AI:** Predictive Modeling, Machine Learning Pipelines, Feature Engineering.
- **Agentic AI & Orchestration:** CrewAI, LangChain, Multi-Agent Systems, LLM Applications, RAG.
- **Database Technologies:** Oracle Database, Oracle APEX, ORDS, SQL Query Optimization.
- **Cloud Infrastructure & DevOps:** Oracle Cloud Infrastructure (OCI), API Gateways, OCI Functions.
- **App Development:** Flutter, Dart, AI-Integrated Web & Mobile Applications.

## Professional Experience

### Associate Technical Consultant — AstuTech Solutions Pvt. Ltd. Dec 2025 – Present

- Engineered an end-to-end AIOps machine learning pipeline in Python to classify Oracle Integration Cloud (OIC) system runs as genuine or dummy logs.
- Deployed the machine learning logic as scalable, serverless Oracle Cloud Infrastructure (OCI) Functions, enabling efficient, real-time execution.

### AI Developer Intern — AstuTech Solutions Pvt. Ltd.

Aug 2025 – Dec 2025

*Project: Supply Chain Risk Predictor*

- Built a hybrid AI system for supply chain risk detection, combining LLM-based data labeling, semantic embeddings, and traditional machine learning on real-time news headlines.
- Applied LLM-based severity scoring to enrich the training dataset for risk classification.
- Trained an ExtraTreesClassifier on TF-IDF and metadata features to predict supply chain risk.

## Projects

### Safara — Intelligent Accident Hotspot Prediction System

- Developed an AI-powered web application that predicts accident-prone locations using historical accident datasets.
- Trained machine learning models to identify risk hotspots and visualize them on interactive maps.
- Integrated an AI chatbot to provide road safety insights and recommendations.

### Krishi Sakhi — Multi-Agent AI Farming Assistant

- Built an LLM-powered agricultural assistant using multi-agent orchestration.
- Delivered crop recommendations, weather analysis, and disease diagnosis through specialized AI agents.
- Designed autonomous workflows for real-time farmer support.

### Atom — Predictive Observability Platform

- Developed an AI-driven observability platform that predicts potential system failures before they occur.
- Processed real-time metrics including CPU utilization, memory usage, latency, and error rates.
- Generated proactive alerts and reliability recommendations using Arima Time-Series Models.

## Leaderships & Achievements

- 2nd Place, National Hackathon — Sairam Engineering College ([Certificate](#))
- 3rd Place, Namma Flutter Community Chennai, hosted at Thiran Technologies ([Certificate](#))
- 3rd Place, National Hackathon — Sri Eshwar College ([Certificate](#))

## Education & Qualifications

### B.Tech, Artificial Intelligence and Data Science

11/2022 – 06/2026

Meenakshi Sundararajan Engineering College

CGPA: 8.04 / 10
